

PARADIGMSHIFT
PEWAUKEE ROBOTICS

April 5th, 2020

Dale Noll, our head coach who exemplifies Gracious Professionalism

Duluth Regional Gracious Professionalism Award

- At the Duluth Regional, there were 60 other teams that we were competing against. **Each team had a unique robot which made playing against different alliances an exciting experience.**
- After being picked by the 4th-seeded alliance, we made it to the semi-finals where we nearly pulled off an upset victory against the 1st-seeded alliance.
- **Our team also won the Gracious Professionalism Award for our helping of many other teams at the competition.** Our contributions included lending parts and tools to other teams, even loaning our spare control system to a team in need. We also helped a team of three students by helping them troubleshoot, build new parts, and even providing one of our students as their drive coach.

No matter the result, everyone had fun. **It was a great experience to see the result of the hard work that we had put in throughout the season as well as helping other teams who needed it. Of course, none of this could have been possible without our generous sponsors.** The Pewaukee High School Robotics Team thanks you all.

FIRST Robotics Season Suspended

Unfortunately, due to the COVID-19 outbreak, the **2020 FIRST Robotics Competition season has been suspended**. While our team is very sad to see the season end, **everyone is proud of what we have accomplished this season and all the progress that we made**. As a team, we feel very lucky to have had the chance to compete at the Duluth Regional Competition

Additionally, in response to the outbreak of COVID-19, **Paradigm Shift is helping in the effort to stop the spread of the virus**. The team has adopted the slogan, **#allcleaneverything**, and decided to disinfect areas and parts that could spread germs easily. We recommend all of you do the same around your house.

Sponsor of the Week:

GE Healthcare

Offseason Activities

As of right now, the school building is closed and all activities cancelled. It is unknown when the team will be able to get back together and begin engineering again. **However, that did not stop us from planning out our offseason.**

Offseason Projects

Paradigm Shift plans to continue doing offseason projects this year. Possible projects include improving this year's robot; building a t-shirt cannon or parade specific robot; and/or implementing a more advanced type of drivetrain called Swerve Drive.

Community Events

Paradigm Shift will participate in many community events throughout the offseason, assuming they are still taking place. Including a demonstration at Summerfest, multiple offseason competitions, sponsor demonstrations, volunteering at the Pewaukee Kiwanis Beach Party, and anything else that comes our way.
